

Reading Ruler for the PC

ScreenRuler is a new reading ruler which allows part of the PC screen to be highlighted in a horizontal band. This will assist anyone with viewing and concentrating on text or objects.

It provides a "strip" or "ruler" across the screen, which can be magnified, can have the contrast changed and have the background "greyed" or dimmed out if desired.

The cursor colour can also be changed easily. ScreenRuler will work with any piece of software, as it acts as an "overlay" on the PC screen. It uniquely magnifies the strip beneath the mouse, and the magnification follows the mouse up and down the screen.

From a technical point of view, it should not interfere or clash with your PC video card or driver.
